# Multi-position bracket kit for "KIP AIR"

We have designed a new multi-position bracket kit in order to improve flexibility and facilitate the mounting of our new KIP-AIR air control within the cab of the current trucks available on the market.

This all-in-one bracket allows bodybuilders to select different ways to mount the air control according to the room available in the cabin. Thus, on the side of our KIP-AIR control we have added two threaded holes to fix this bracket, as shown in the picture.

The new multi-position bracket has to be ordered separately.

Furthermore, we remind that is also available the KIP-AIR plastic support:

Kit Supporto Plastica KIP AIR COD. 100-002-60067
