

Setting pressure value

Safety sealing

Safety sealing of pressure relief valves

Hereby we are glad to inform you that it is now available the safety sealing option of pressure relief assembly of tipping valves.

This sealing is composed of a heat-shrink covering that is applied onto the main relief valve; tampering of the same causes the irrevocable crack.

The order codes including covering and fitting onto the valve are:

- Safety sealing for tipping valves series Modular 150/200/250: **121-901-00110**
- Safety sealing for tipping valves series FE/FM/FP: **121-901-00129**

The above part numbers have to be stated on the orders together with the tipping valves for which you require the safety sealing option. It is also necessary to specify the required setting value of the pressure relief valve if it differs from what specified on our catalogue,

Our Export Sales Dept. is at your disposal for any further information you may need.
