

Questa gamma di serbatoi è stata appositamente studiata per l'installazione su trattori stradali DAF TRUCKS. I serbatoi sono stati progettati per essere installati al posto della scaletta di salita retrocabina originalmente installata sui veicoli e permettono di soddisfare l'esigenza di avere un serbatoio idraulico di notevole capacità, conservando sia il serbatoio gasolio originale che la ruota di scorta (oppure serbatoio gasolio supplementare).

*This range of tanks has been specific studied for the installation on road tractors manufactured by DAF TRUCKS. The tanks have been projected to be fitted to the place of the side ladder, to climb rear the cab, originally installed on the vehicles allowing to satisfy the demand to have an hydraulic tank of notable capacity as well as preserving the main original fuel tank and both the spare wheel (or the additional fuel tank).*

### Ingombro serbatoio / Tank dimensions

Serbatoio appositamente realizzato da **OMFB per veicoli DAF**. Viene montato sul lato sinistro a ore 10, al posto della scaletta (non è possibile quindi montare la passatoia). Per questo, è necessaria la carenatura laterale in cui sono presenti i gradini. Costruito con le più moderne tecnologie, garantisce la massima affidabilità e durata nel tempo, oltre che un aspetto esteriore perfettamente integrabile sui moderni trattori stradali. La gamma di accessori rende il suo impiego particolarmente flessibile.

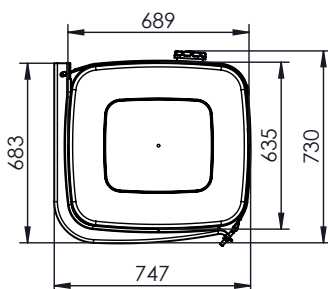

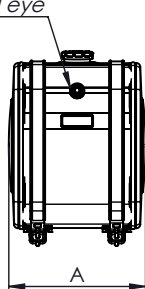

*Oil tank especially designed by OMFB for DAF trucks. It is fitted on the left-hand side, 10 o'clock position instead of the stepladder (therefore it is not possible to mount the metal grid). For this reason it is necessary to get side skirt kit with built-in steps. Based on the latest technology, these aluminium tanks are produced to ensure maximum reliability and longer lifetime as well as an exterior aspect that can be perfectly integrated. High versatility is granted by a wide choice of available accessories.*
