

Tanks with emergency hand pump

Starting from next deliveries, the application of security hand pumps upon the tanks of mini power packs will be subjected to improvements.

More precisely, the mounting plate of the hand pump will be welded directly to the front of the tank and it will be provided with four threaded holes to accept the fixing screws of the hand pump. Therefore the four fixing bolts inside the internal part of the tank will be removed. These, in the event of hand pump failures, forced the disassembly of the motor-gear pump assembly in order to divide the hand pump from the tank.

This will imply a different management of the components in the warehouse and therefore also our codes will be changed.

- **IN THE PAST** : customers were used to order mini power packs (along with tanks) and optional security hand pumps. This after re-elaborating tanks and assembling hand pumps.

Example : **code 147.442.10316** description : P.K. STD 24V 3000W S/10 1P 3,1

code 149.011.00619 description : APP.GRP.PMP.PMSE 15 A P.K. SNZ.RBN.

- **NOW** : customers have to order electro pump groups (without tanks), tanks, complete with mounting plate and optional security hand pumps.

Example : **code 147.441.10319** description: EPK.STD 24V 3000W 1P 3,1

code 149.101.01100 description : SRB.ACC.COMPL.X EPK S10+APL.PM

code 149.011.00673 description : APP.2°SR.GR.PMP.PMSE 15A PK SNZ RBN.

We are sure that this solution will bring further benefits to the reliability of the product that all inconveniences caused by its new management will be soon forgotten.

However our export department will always be at your disposal for any further information you may request.
