

NEW ELECTRIC VALVE "FE 40"

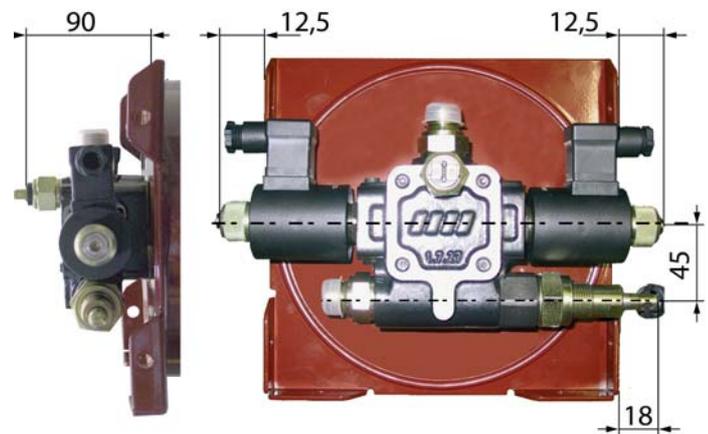

"FE 45" END OF PRODUCTION

OLD VERSION

TANK WITH "FE 45"

NEW VERSION

TANK WITH "FE 40"

In few weeks the electric tipping valve FE 45 will be replaced by the new one named FE 40 having similar technical features but slightly different overall dimensions.

As shown in the picture, the hole pattern, ports and relief valve arrangements are just the same, while the **coils, pressure switch port and mechanical end-of-stroke are moved into a different position compared to the old model.**

Thus, we would suggest you to check in time any possible interference in respect of standard applications since just a few units of the old valve FE 45 will be available again.

In due course you will receive the new FE 40 data sheet.

Our sales department is at your complete disposal for any further information you may need.
