

Plastic tanks

In our ongoing commitment to improving product quality, we are pleased to inform you that our 30L and 46L plastic oil tanks have been updated with new features.

These enhancements include an integrated oil level indicator with a built-in thermometer for easier monitoring and temperature control, as well as a redesigned 4-hole flange that allows flexible installation of the return filter in multiple positions.

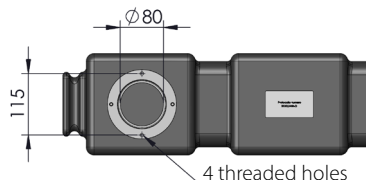

The new design also supports the use of additional accessories, such as a 360° adjustable filter head.

V1PR1N04641 - 46 lt

Replace the V1PR1N04640
